✓ Active

This ruleset will be enforced

○ Disabled

This ruleset will not be enforced

adding them to the bypass list.

Bypass list is empty

Targets

Which branches do you want to make a ruleset for?

Target branches

Branch targeting determines which branches will be protected by this ruleset. Use branches under this ruleset. Use exclusion patterns to exclude branches.

c. Protect branch

Target → Add target → Include by pattern → main/dev/... → Add Inclusion pattern

- d. In the Rules section, check the boxes for "Require a pull request before merging" and "Require status check to pass" (check the CI pipeline status; only allow merging if successful).

Rules

Which rules should be applied?

Branch rules

- ☐ **Restrict creations**
Only allow users with bypass permission to create matching refs.
- ☐ **Restrict updates**
Only allow users with bypass permission to update matching refs.
- ☒ **Restrict deletions**
Only allow users with bypass permissions to delete matching refs.
- ☐ **Require linear history**
Prevent merge commits from being pushed to matching refs.
- ☐ **Require deployments to succeed**
Choose which environments must be successfully deployed to before refs can be pushed into a ref that matches this rule.
- ☐ **Require signed commits**
Commits pushed to matching refs must have verified signatures.
- ☐ **Require a pull request before merging**
Require all commits be made to a non-target branch and submitted via a pull request before they can be merged.
- ☐ **Require status checks to pass**
Choose which status checks must pass before the ref is updated. When enabled, commits must first be pushed to another ref where the checks pass.
- ☒ **Block force pushes**
Prevent users with push access from force pushing to refs.
- ☐ **Require code scanning results**
Choose which tools must provide code scanning results before the reference is updated. When configured, code scanning must be

☒ **Require a pull request before merging**

Require all commits be made to a non-target branch and submitted via a pull request before they can be merged.

Hide additional settings ^

Required approvals

2 ▾

The number of approving reviews that are required before a pull request can be merged.

☐ **Dismiss stale pull request approvals when new commits are pushed**
New, reviewable commits pushed will dismiss previous pull request review approvals.

☐ **Require review from Code Owners**
Require an approving review in pull requests that modify files that have a designated code owner.

☐ **Require approval of the most recent reviewable push**
Whether the most recent reviewable push must be approved by someone other than the person who pushed it.

☐ **Require conversation resolution before merging**
All conversations on code must be resolved before a pull request can be merged.

Allowed merge methods [Preview](#)

Merge ▾

When merging pull requests, you can allow any combination of merge commits, squashing, or rebasing. At least one option must be enabled.

☒ **Require status checks to pass**

Choose which status checks must pass before the ref is updated. When enabled, commits must first be pushed to another ref where the checks pass.

Hide additional settings ^

☐ **Require branches to be up to date before merging**
Whether pull requests targeting a matching branch must be tested with the latest code. This setting will not take effect unless at least one status check is enabled.

☐ **Do not require status checks on creation**
Allow repositories and branches to be created if a check would otherwise prohibit it.
