

Lab 03

Control flow statements

1 Review

- The if statement allows you to execute a block of code only if a specified condition is true.
- The if-else statement provides an alternative block of code to execute if the condition is false.
- The if-else-if... statement allows for multiple conditions to be checked in sequence.
- The switch-case statement allows for a variable to be compared against a list of values, then executing the corresponding block of code when a match is found.
- The for, while, do-while loop is used to execute a block of code a specific number of times!!!

2 Requirements

In-class assignment:

a) {P03, P12, P13} in 'W03.a-Control flow statements-Problems.pdf' file.

b) {P02, P20} in 'W03.b-Loop Statement-Problems.pdf' file.

Homework:

a) {P09, P14, P19, P23, P27} in 'W03.a-Control flow statements-Problems.pdf' file.

b) 5 problems from P01 to P40 in 'W03.b-Loop Statement-Problems.pdf' file:

Last digit(your student id) == 1, 5, 9 => P01, P05, P09, P13...

Last digit(your student id) == 2, 6 => P02, P06, P10, P14...

Last digit(your student id) == 3, 7=>P03, P07, P11, P15...

Last digit(your student id) == 0, 4, 8=>P04, P08, P12, P16...

(Nested loops, pow() functions are not allowed.)

Students must design at least 3 test cases for each program.

```
// <YOUR STUDENT ID>
// <YOUR FULL NAME>
// <YOUR CLASS>

// Test case 1
// Input:
// Output:
...
// Test case 3
// Input:
// Output:

int main(){
    //your code here

    return 0;
}
```
